

# ERJ SERIES FS2004 FD UPDATE

Flight Dynamics Update Version 2.0 for **Project ERJ** ERJ-135/140/145/Legacy Aircraft  
Aircraft by Nick Botamer - Update by Kevin Au

## Introduction:

=====

This is an FS2004 update of the flight dynamics of the previously released ERJ-135/140/145 and Legacy series FS2002.

## Installation:

=====

Installation of the flight dynamics update for the ERJ series is a two part process.

### Part 1:

Open the folder of the aircraft you have installed in FS2004. Locate the \*.air file, and take note of its name. Find the same named file in the update package, and replace the old file.

### Part 2:

Open the *aircraft.cfg* file of your installed aircraft. Select all the text below the [fltsim.x] entry. This should start with the [General] section, and delete this text. Now, open the *add\_to\_aircraft.cfg* that was included with the correct air file in the update package and open it separately. Copy all the text from this file and paste it below the [fltsim.x] section in the installed aircraft, and save the *aircraft.cfg* file.

Your flight dynamics should now be updated. Repeat this process for all ERJ aircraft installed in FS2004.

## Redistribution:

=====

These files may not be uploaded to any site other than <http://www.project-erj.com> without prior permission.

## Copyright:

=====

These aircraft and repaints are copyright protected and may not be edited without prior consent. The author(s) is in no way associated with Embraer or the airline(s) depicted and makes no claims to their materials.
